Инструменты визуализации при работе с Большими Данными

Андрей Кузнецов 22.10.2022

Структура курса

- 1. Введение в Большие Данные
- 2. Hadoop экосистема и MapReduce
- 3. SQL поверх больших данных
- 4. Инструменты визуализации при работе с Большими Данными 🕒
- 5. Введение в Scala
- 6. Модель вычислений Spark: RDD
- 7. Approximate алгоритмы для больших данных
- 8. Потоковая обработка данных (Kafka, Spark Streaming, Flink)
- 9. Гостевая лекция VK
- 10. Гостевая лекция VK

План занятия

- 1. Apache Zeppelin
- 2. Polynote
- 3. Big Data Tools
- 4. Cloud Solutions
- 5. Workshop

Where we are?

Big Data platform

- Hadoop Distributed Filesystem (NM, DN)
- Apache Hadoop YARN (RM, NM)

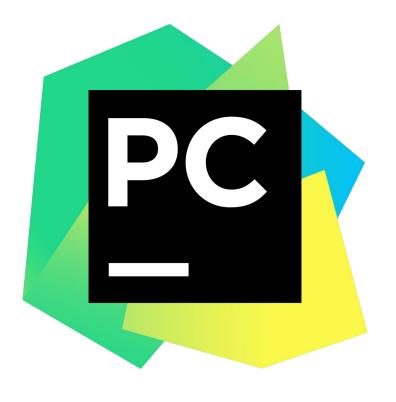

Big Data applications

Hadoop MapReduce

- → Tools to work with
- SQL-like processing frameworks
- Apache Spark
- Stream processing frameworks + Apache Kafka

Classic small data stack

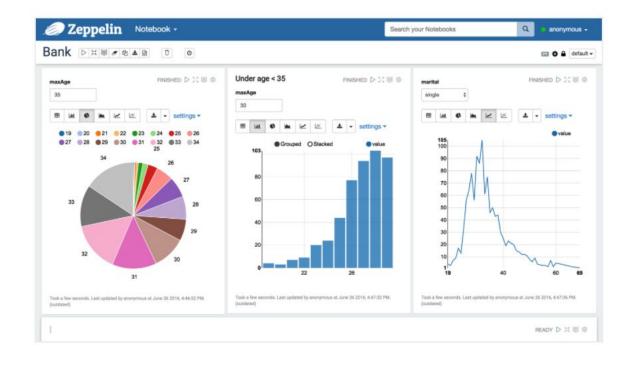

Apache Zeppelin in a nutshell

Multi-purpose Notebook

The Notebook is the place for all your needs

- Data Ingestion
- Data Discovery
- Data Analytics
- O Data Visualization & Collaboration

Apache Zeppelin in a nutshell

- Хочет быть как jupyter notebook / jupyterlab
- умеет нативно работать со Scala/Java
- Hive/Spark удобно конфигурировать и работать
- Неплохие визуализации

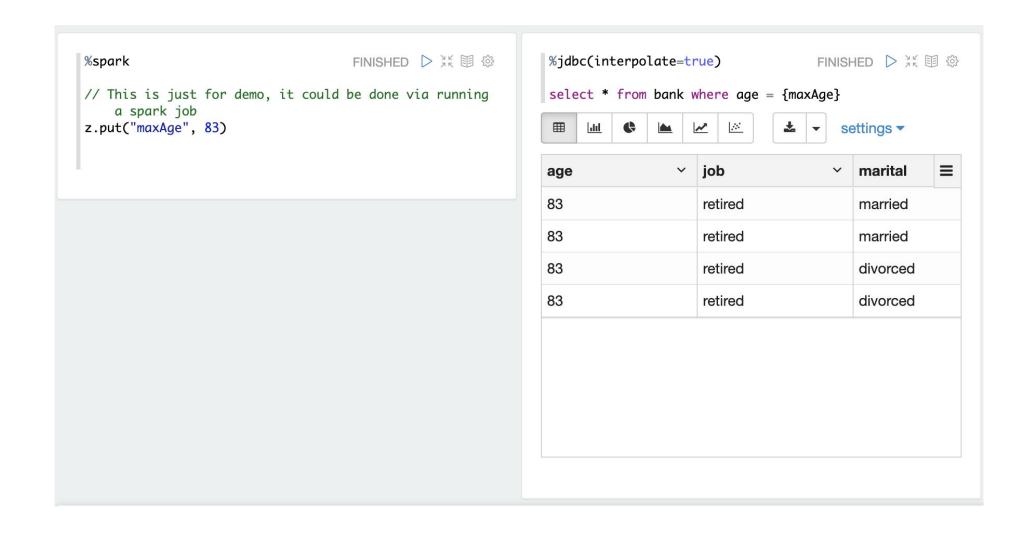

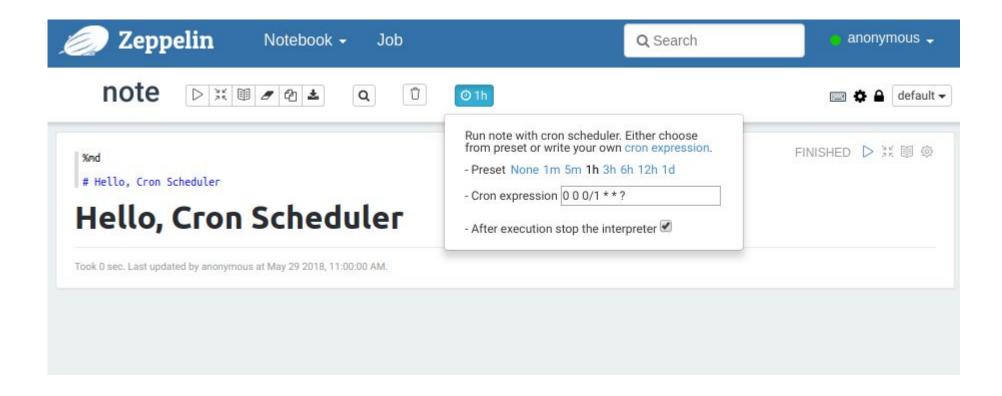

Zep context. One interface to rule them all

Scheduling. Don't try on prod!

Notebook storages

- 1. (default) use local file system and version it using local Git repository GitNotebookRepo
- 2. all notes are saved in the notebook folder in your local File System VFSNotebookRepo
- all notes are saved in the notebook folder in hadoop compatible file system -FileSystemNotebookRepo
- 4. storage using Amazon S3 service S3NotebookRepo
- 5. storage using Azure service AzureNotebookRepo
- 6. storage using Google Cloud Storage GCSNotebookRepo
- 7. storage using Aliyun OSS OSSNotebookRepo
- 8. storage using MongoDB MongoNotebookRepo
- 9. storage using GitHub GitHubNotebookRepo

Interpreters. JDBC

- Postgresql JDBC Driver
- Mysql JDBC Driver
- MariaDB JDBC Driver
- Redshift JDBC Driver
- Apache Hive JDBC Driver
- Presto/Trino JDBC Driver
- Impala JDBC Driver
- Apache Phoenix itself is a JDBC driver
- Apache Drill JDBC Driver
- Apache Tajo JDBC Driver

Polynote in a nutshell

- Умеет варить объекты в одном кернели и конвертить из Scala в Python
- Сырой, но хоть какая-то альтернатива Zeppelin / Jupyter

https://polynote.org/

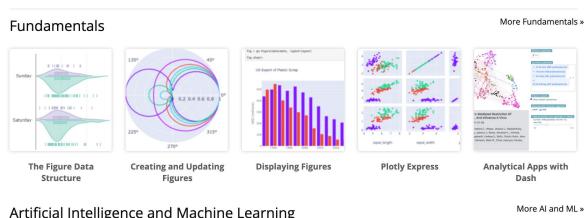

Big Data Tools in a nutshell

- Интеллектуальная поддержка Zeppelin notebooks
- Интеграция с инструментами Spark и Hadoop
- Распределенные файловые системы и столбцовые форматы
- Инструменты для работы с таблицами и диаграммами

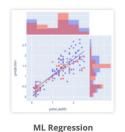

```
🖊 Zeppelin Tutorial/Basic Features (Spark) 🛚 🗡
       case class Bank(age: Integer, job: String, marital: String, educati
18
19
        val bank = bankText.map(s => s.split(";")).filter(s => s(0) != "\"ag
20
21
            s \Rightarrow Bank(s(0).toInt,
                    s(1).replaceAll("\"", ""),
22
                    s(2).replaceAll("\"", ""),
23
                    s(3).replaceAll("\"", ""),
24
                    s(5).rA("\"", "").toInt
25
                       m replaceAll(regex: String, replacement: String)
26
                       m replaceAllLiterally(literal: String, replacement...
27
        ).toDF()
       bank.register m charAt(index: Int)
28
                       m toCharArray()
                                                                           Arr
          import org.a m copyToArray[B >: Char](xs: Array[B])
          import java. m copyToArray[B >: Char](xs: Array[B], start: Int)
          import java. m copyToArray[B >: Char](xs: Array[B], start: Int, ]
          bankText: or m forall(p: Char => Boolean)
           paralleliz m isTraversableAgain
```

Tableau. Expensive industrial standart

Tableau native data connectors

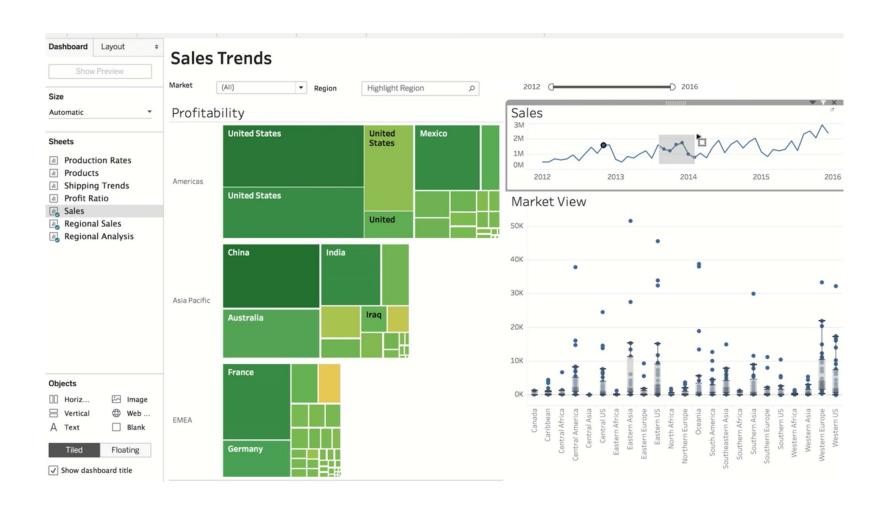

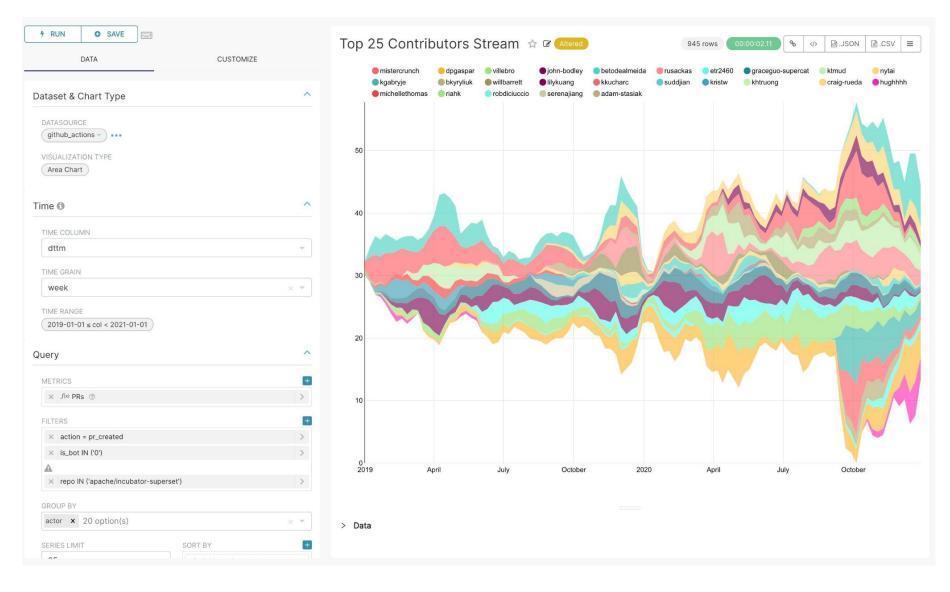

Connect to all of your data—no matter where it resides.

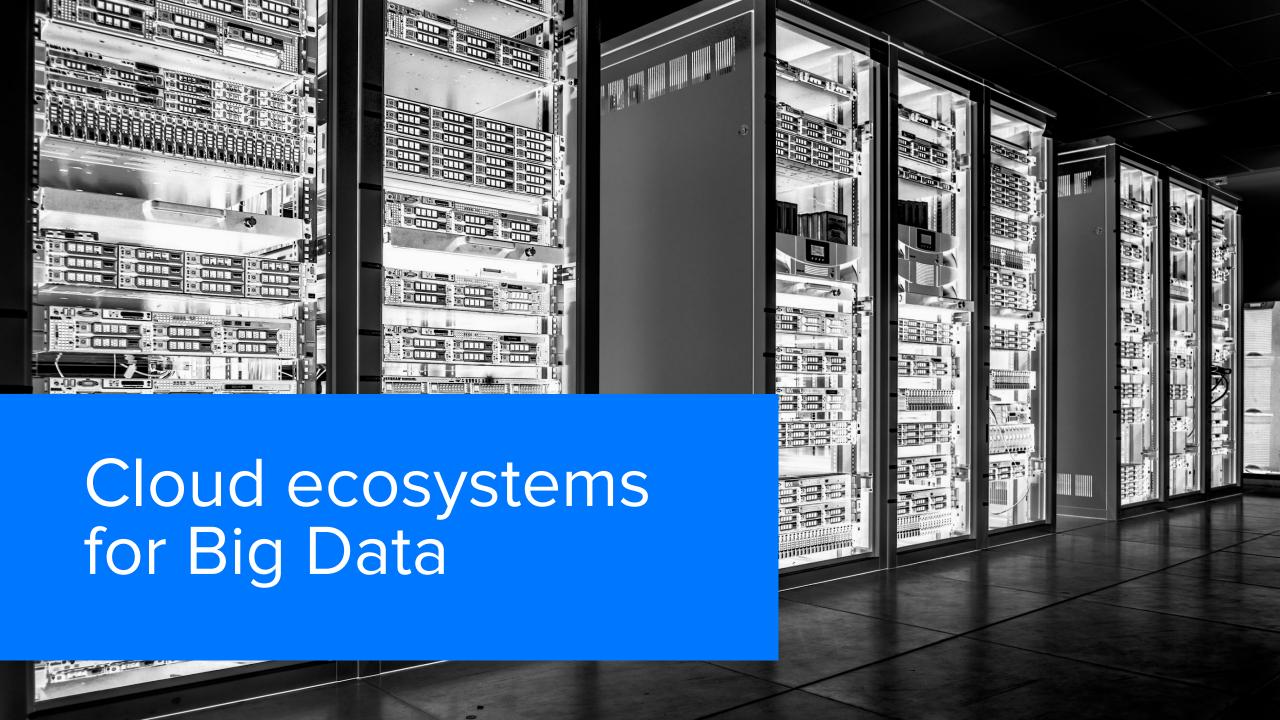

Tableau offers native connectors built and optimized for many databases and files—from spreadsheets and PDFs to big data, cube, and relational databases on-premises or in the cloud, even application data or data on the web.

Tableau. Interface

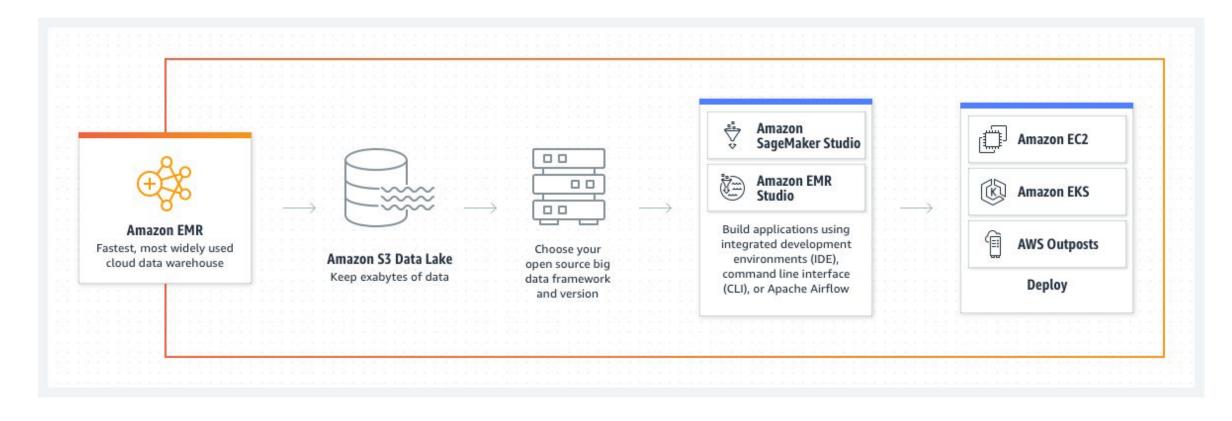

SuperSet

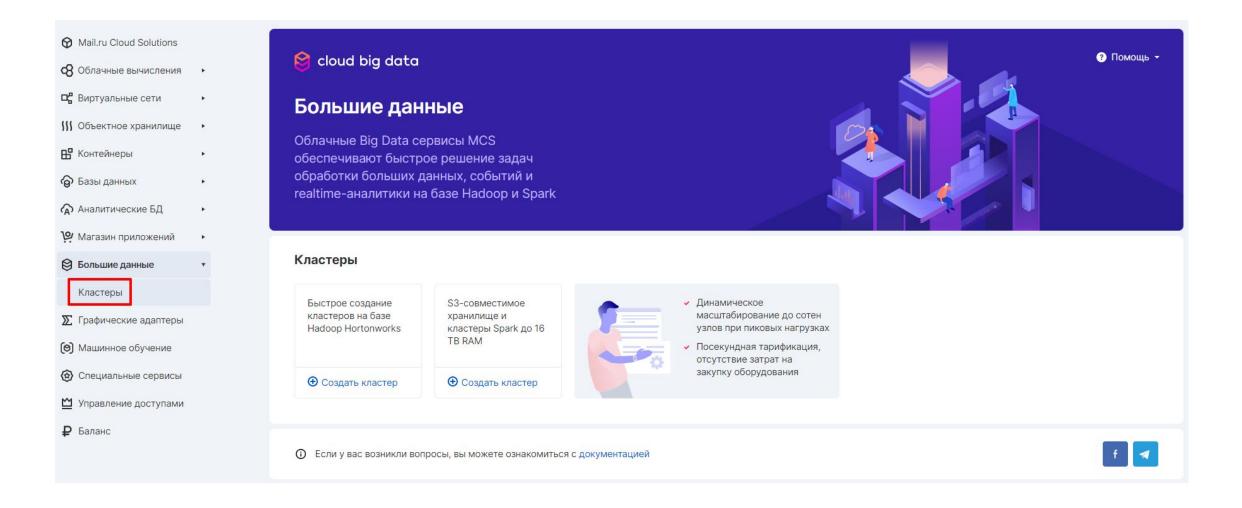

https://aws.amazon.com/ru/emr/feat ures/?nc=sn&loc=2&dn=1

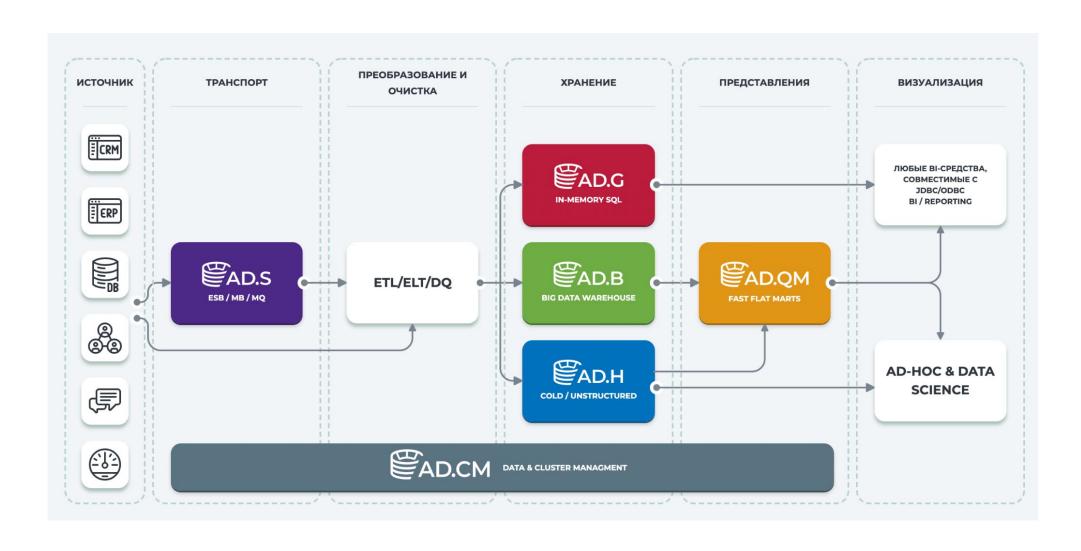

Amazon EMR – это платформа для быстрой обработки, анализа и работы с большими данными с помощью машинного обучения (ML), использующая платформы с открытым исходным кодом.
